Lava Layering
4th Grade NGSS, Common Core, and 21st Century Skills Alignment Document

WHAT STUDENTS DO: Sequence Lava Flow Events using Drill Cores and Cuts.

Students will sequence lava flows produced by multiple eruptions. Baking soda, vinegar, and play dough, are used to model fluid lava flows. Students will be asked to observe where the flows travel, make a model, and interpret the stratigraphy.

NRC Core Question: ESS1: Earth’s Place in the Universe |

How do people reconstruct and date events in Earth’s planetary history?
NRC Component Question: ESS1C: The History of Planet Earth

Students will be able
IO1: to model a series of lava flows and reconstruct geologic events using relative dating techniques
1.0 About This Activity

Mars lessons leverage *A Taxonomy for Learning, Teaching, and Assessing* by Anderson and Krathwohl (2001) (see *Section 4 and Teacher Guide* at the end of this document). This taxonomy provides a framework to help organize and align learning objectives, activities, and assessments. The taxonomy has two dimensions. The first dimension, cognitive process, provides categories for classifying lesson objectives along a continuum, at increasingly higher levels of thinking; these verbs allow educators to align their instructional objectives and assessments of learning outcomes to an appropriate level in the framework in order to build and support student cognitive processes. The second dimension, knowledge, allows educators to place objectives along a scale from concrete to abstract. By employing Anderson and Krathwohl’s (2001) taxonomy, educators can better understand the construction of instructional objectives and learning outcomes in terms of the types of student knowledge and cognitive processes they intend to support. All activities provide a mapping to this taxonomy in the Teacher Guide (at the end of this lesson), which carries additional educator resources.

Combined with the aforementioned taxonomy, the lesson design also draws upon Miller, Linn, and Gronlund’s (2009) methods for (a) constructing a general, overarching, instructional objective with specific, supporting, and measurable learning outcomes that help assure the instructional objective is met, and (b) appropriately assessing student performance in the intended learning-outcome areas through rubrics and other measures.

*How Students Learn: Science in the Classroom* (Donovan & Bransford, 2005) advocates the use of a research-based instructional model for improving students’ grasp of central science concepts. Based on conceptual-change theory in science education, the 5E Instructional Model (BSCS, 2006) includes five steps for teaching and learning: Engage, Explore, Explain, Elaborate, and Evaluate. The Engage stage is used like a traditional warm-up to pique student curiosity, interest, and other motivation-related behaviors and to assess students’ prior knowledge. The Explore step allows students to deepen their understanding and challenges existing preconceptions and misconceptions, offering alternative explanations that help them form new schemata. In Explain, students communicate what they have learned, illustrating initial conceptual change. The Elaborate phase gives students the opportunity to apply their newfound knowledge to novel situations and supports the reinforcement of new schemata or its transfer. Finally, the Evaluate stage serves as a time for students’ own formative assessment, as well as for educators’ diagnosis of areas of confusion and differentiation of further instruction. The 5E stages can be cyclical and iterative.
2.0  Instructional Objectives, Learning Outcomes, & Standards

Instructional objectives and learning outcomes are aligned with

- Achieve Inc.’s, *Next Generation Science Standards (NGSS)*

- National Governors Association Center for Best Practices (NGA Center) and Council of Chief State School Officers (CCSSO)’s, *Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects*

The following chart provides details on alignment among the core and component NGSS questions, instructional objectives, learning outcomes, and educational standards.

- Your instructional objectives (IO) for this lesson align with the NGSS Framework and NGSS.

- You will know that you have achieved these instructional objectives if students demonstrate the related learning outcomes (LO).

- You will know the level to which your students have achieved the learning outcomes by using the suggested rubrics (see Teacher Guide at the end of this lesson).

**Quick View of Standards Alignment:**

The Teacher Guide at the end of this lesson provides full details of standards alignment, rubrics, and the way in which instructional objectives, learning outcomes, 5E activity procedures, and assessments were derived through, and align with, Anderson and Krathwohl’s (2001) taxonomy of knowledge and cognitive process types. For convenience, a quick view follows:

On behalf of NASA’s Mars Exploration Program, this lesson was prepared by Arizona State University’s Mars Education Program, under contract to NASA’s Jet Propulsion Laboratory, a division of the California Institute of Technology. These materials may be distributed freely for non-commercial purposes. Copyright 2013; 2010; 2000.
The connections diagram is used to organize the learning outcomes addressed in the lesson to establish where each will meet the Next Generation Science Standards, ELA Common Core Standards, and the 21st Century Skills and visually determine where there are overlaps in these documents.

**LO1a:** to construct a geologic map of a volcano model

**LO1b:** to use geologic sampling and relative dating techniques

**LO1c:** to justify an explanation for the geologic mapping and history of the volcano model
4.0 Evaluation/Assessment

**Rubric:** A rubric has been provided to assess student understanding of the simulation and to assess metacognition. A copy has been provided in the Student Guide for students to reference prior to the simulation. This rubric will allow them to understand the expectations set before them.

LAVA LAYERING

Teacher Guide

(L) Teacher Resource. Lava Layering Rubric (1 of 3)

You will know the level to which your students have achieved the Learning Outcomes, and thus the Instructional Objective(s), by using the suggested Rubrics below.

Instructional Objective 1: to model a series of lava flows and reconstruct geologic events using relative dating techniques

Related Standard(s)

National Science Education Standards (NSES)
UNIFYING CONCEPTS & PROCESSES
Grades K-12 (A2) Evidence, models, and explanations
Evidence consists of observations and data on which to base scientific explanations. Using evidence to understand interactions allows individuals to predict changes in natural and designed systems. Models are tentative schemes or structures that correspond to real objects, events, or classes of events, and that have explanatory power. Models help scientists and engineers understand how things work. Models take many forms, including physical objects, plans, mental constructs, mathematical equations, and computer simulations.

Scientific explanations incorporate existing scientific knowledge and new evidence from observations, experiments, or models into internally consistent, logical statements. Different terms, such as “hypothesis,” “model,” “law,” “principle,” “theory,” and “paradigm” are used to describe various types of scientific explanations.

As students develop and as they understand more science concepts and processes, their explanations should become more sophisticated. That is, their scientific explanations should more frequently include a rich scientific knowledge base, evidence of logic, higher levels of analysis, greater tolerance of criticism and uncertainty, and a clearer demonstration of the relationship between logic, evidence, and current knowledge.

Next Generation Science Standards (NGSS)
Practices: Developing and Using Models
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Develop and/or use models to describe and/or predict phenomena. (Grades 3-5)
• Develop a diagram or simple physical prototype to convey a proposed object, tool, or process.

Next Generation Science Standards (NGSS)
Practices: Planning and Carrying out Investigations
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Make observations and/or measurements to produce data to serve as the basis for evidence for an explanation of a phenomenon or test a design solution.
Next Generation Science Standards (NGSS)
Practices: Analyzing and Interpreting Data
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

- Represent data in tables and/or various graphical displays (bar graphs, pictographs and/or pie charts) to reveal patterns that indicate relationships.
- Compare and contrast data collected by different groups in order to discuss similarities and differences in their findings.

Next Generation Science Standards (NGSS)
Practices: Constructing Explanations and Designing Solutions
(Learning Outcomes Addressed: LO1b, LO1c)

- Use evidence (e.g., measurements, observations, patterns) to construct or support an explanation or design a solution to a problem.

Next Generation Science Standards (NGSS)
Practices: Engaging in Argument from Evidence
(Learning Outcomes Addressed: LO1c)

- Construct and/or support an argument with evidence, data, and/or a model.

Next Generation Science Standards (NGSS)
Understandings about the Nature of Science Practices: Scientific Knowledge is Based on Empirical Evidence
(Learning Outcomes Addressed: LO1b)

- Scientists use tools and technologies to make accurate measurements and observations.

Next Generation Science Standards (NGSS)
Understandings about the Nature of Science Practices: Scientific Knowledge is Open to Revision in Light of New Evidence
(Learning Outcomes Addressed: LO1c)

- Science explanations can change based on new evidence.

Next Generation Science Standards (NGSS)
Understandings about the Nature of Science Practices: Scientific Models, Laws, Mechanisms, and Theories explain Natural Phenomena
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

- Science explanations describe the mechanisms for natural events.

Next Generation Science Standards (NGSS)
Cross-Cutting Concepts: Patterns
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)
• Students identify similarities and differences in order to sort and classify natural objects and designed products. They identify patterns related to time, including simple rates of change and cycles, and to use these patterns to make predictions.

**Next Generation Science Standards (NGSS)**

**Cross-Cutting Concepts: Cause and Effect**  
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Students routinely identify and test causal relationships and use these relationships to explain change. They understand events that occur together with regularity might or might not signify a cause and effect relationship.

**Next Generation Science Standards (NGSS)**

**Understandings about the Nature of Science**  
**Cross-Cutting Concepts: Scientific Knowledge assumes an Order and Consistency in Natural Systems**  
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Science assumes consistent patterns in natural systems.
• Basic laws of nature are the same everywhere in the universe.

**Next Generation Science Standards (NGSS)**

**Understandings about the Nature of Science**  
**Cross-Cutting Concepts: Science Addresses Questions about the Natural and Material World**  
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Science findings are limited to what can be answered with empirical evidence.

**Common Core State Standards**

**Writing Standards: Text Types and Purposes**  
(Learning Outcomes Addressed: LO1c)

• Write informative/explanatory texts to examine a topic and convey ideas and information clearly.
  o Introduce a topic clearly and group related information in paragraphs and sections; include formatting (e.g., headings), illustrations, and multimedia when useful to aiding comprehension.
  o Develop the topic with facts, definitions, concrete details, quotations, or other information and examples related to the topic.
  o Link ideas within categories of information using words and phrases (e.g., another, for example, also, because).
  o Use precise language and domain-specific vocabulary to inform about or explain the topic.
  o Provide a concluding statement or section related to the information or explanation presented.

**Common Core State Standards**

**Writing Standards: Production and Distribution**  
(Learning Outcomes Addressed: LO1c)
• Produce clear and coherent writing in which the development and organization are appropriate to task, purpose, and audience.

Common Core State Standards
Writing Standards: Research to Build and Present Knowledge
(Learning Outcomes Addressed: LO1c)

• Recall relevant information from experiences or gather relevant information from print and digital sources; take notes and categorize information, and provide a list of sources.

Common Core State Standards
Speaking and Listening: Comprehension and Collaboration
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Engage effectively in a range of collaborative discussions (one-on-one, in groups, and teacher-led) with diverse partners on grade 4 topics and texts, building on others’ ideas and expressing their own clearly.
  o Come to discussions prepared, having read or studied required material; explicitly draw on that preparation and other information known about the topic to explore ideas under discussion.
  o Follow agreed-upon rules for discussions and carry out assigned roles.
  o Pose and respond to specific questions to clarify or follow up on information, and make comments that contribute to the discussion and link to the remarks of others.
  o Review the key ideas expressed and explain their own ideas and understanding in light of the discussion.

Common Core State Standards
Speaking and Listening: Presentation of Knowledge and Ideas
(Learning Outcomes Addressed: LO1c)

• Report on a topic or text, tell a story, or recount an experience in an organized manner, using appropriate facts and relevant, descriptive details to support main ideas or themes; speak clearly at an understandable pace.

21st Century Skills
Critical Thinking
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Students construct their own scientific understanding and develop their scientific process skills by asking scientific questions, designing and conducting investigations, constructing explanations from their observations, and discussing their explanations with others.

21st Century Skills
Communication
(Learning Outcomes Addressed: LO1a, LO1b)
• Students understand that models are simplified representations of real objects and processes, and that models serve as a means to communicate ideas and knowledge about how things work.

21st Century Skills Collaboration
(Learning Outcomes Addressed: LO1a, LO1b, LO1c)

• Students work collaboratively with others, both in small and large groups, in their science classroom.

21st Century Skills Productivity and Accountability
(Learning Outcomes Addressed: LO1b)

• Students identify a variety of tools and techniques that scientists use to gather scientific information depending on what it is they want to know and the circumstances under which data will be collected.

(M) Teacher Resource. Placement of Instructional Objective and Learning Outcomes in Taxonomy (2 of 3)

IO1: to model a series of lava flows and reconstruct geologic events using relative dating techniques (6.3; Cb)

LO1a: to construct a geologic map of a volcano model (6.3; Cb)

LO1b. to use geologic sampling and relative dating techniques (3.2; Cb)

LO1c. to justify an explanation for the geologic mapping and history of the volcano model (5.2; Cb)
LAVA LAYERING

(M) Teacher Resource. Placement of Instructional Objective and Learning Outcomes in Taxonomy (3 of 3)

The design of this activity leverages Anderson & Krathwohl's (2001) taxonomy as a framework. Below are the knowledge and cognitive process types students are intended to acquire per the instructional objective(s) and learning outcomes written for this lesson. The specific, scaffolded 5E steps in this lesson (see 5.0 Procedures) and the formative assessments (worksheets in the Student Guide and rubrics in the Teacher Guide) are written to support those objective(s) and learning outcomes. Refer to (M, 1 of 3) for the full list of categories in the taxonomy from which the following were selected. The prior page (M, 2 of 3) provides a visual description of the placement of learning outcomes that enable the overall instructional objective(s) to be met.

At the end of the lesson, students will be able

**IO1:** to model a series of lava flows and reconstruct geologic events using relative dating techniques

**6.3:** to construct

**Cb:** knowledge of subject-specific techniques and methods

To meet that instructional objective, students will demonstrate the abilities:

**LO1a:** to construct a geologic map of a volcano model

**6.3:** to construct

**Cb:** knowledge of subject-specific techniques and methods

**LO1b:** to use geologic sampling and relative dating techniques

**3.2:** to use

**Cb:** knowledge of subject-specific techniques and methods

**LO1c:** to justify an explanation for the geologic mapping and history of the volcano model

**5.2:** to justify

**Cb:** knowledge of subject-specific techniques and methods
