

# Strange New Planet

Middle School Alignment Document  
National Resource Council Framework, Next Generation Science Standards, Common Core State Standards, and 21<sup>st</sup> Century Skills

## WHAT STUDENTS DO: Explore a Model Planet to Discover New Features

Students find out how human curiosity in planetary exploration results in science questions, engineering solutions, and teamwork. This activity demonstrates how planetary features are discovered by the use of remote-sensing techniques. Students will experience the different phases in planetary exploration, including telescope observations, fly by missions, orbiters, landers, rovers...and their own ideas about human exploration. In this collection, this lesson provides one of the building blocks for understanding the relationship among science, engineering, technology, and teamwork, necessary to discovery and innovation.

### NRC FRAMEWORK / NGSS CORE & COMPONENT QUESTIONS

#### HOW DO ENGINEERS SOLVE PROBLEMS?

*NRC Core Question: ETS1: Engineering Design*

#### What is a design for? What are the criteria and constraints of a successful solution?

*NRC ETS1.A: Defining and Delimiting an Engineering Problem*

### INSTRUCTIONAL OBJECTIVES (IO)

*Students will be able to*

**IO1: use a physical model to investigate and describe how scientists and engineers understand the limitations presented through certain technologies and use a variety of increasingly complex tools to explore our solar system**

## 1.0 About This Activity

The Mars lessons leverage *A Taxonomy for Learning, Teaching, and Assessing* by Anderson and Krathwohl (2001) (see *Section 4* and *Teacher Guide* at the end of this document). This taxonomy provides a framework to help organize and align learning objectives, activities, and assessments. The taxonomy has two dimensions. The first dimension, cognitive process, provides categories for classifying lesson objectives along a continuum, at increasingly higher levels of thinking; these verbs allow educators to align their instructional objectives and assessments of learning outcomes to an appropriate level in the framework in order to build and support student cognitive processes. The second dimension, knowledge, allows educators to place objectives along a scale from concrete to abstract. By employing Anderson and Krathwohl's (2001) taxonomy, educators can better understand the construction of instructional objectives and learning outcomes in terms of the types of student knowledge and cognitive processes they intend to support. All activities provide a mapping to this taxonomy in the *Teacher Guide* (at the end of this lesson), which carries additional educator resources. Combined with the aforementioned taxonomy, the lesson design also draws upon Miller, Linn, and Gronlund's (2009) methods for (a) constructing a general, overarching, instructional objective with specific, supporting, and measurable learning outcomes that help assure the instructional objective is met, and (b) appropriately assessing student performance in the intended learning-outcome areas through rubrics and other measures. Construction of rubrics also draws upon Lanz's (2004) guidance, designed to measure science achievement.

*How Students Learn: Science in the Classroom* (Donovan & Bransford, 2005) advocates the use of a research-based instructional model for improving students' grasp of central science concepts. Based on conceptual-change theory in science education, the 5E Instructional Model (BSCS, 2006) includes five steps for teaching and learning: Engage, Explore, Explain, Elaborate, and Evaluate. The Engage stage is used like a traditional warm-up to pique student curiosity, interest, and other motivation-related behaviors and to assess students' prior knowledge. The Explore step allows students to deepen their understanding and challenges existing preconceptions and misconceptions, offering alternative explanations that help them form new schemata. In Explain, students communicate what they have learned, illustrating initial conceptual change. The Elaborate phase gives students the opportunity to apply their newfound knowledge to novel situations and supports the reinforcement of new schemata or its transfer. Finally, the Evaluate stage serves as a time for students' own formative assessment, as well as for educators' diagnosis of areas of confusion and differentiation of further instruction. This five-part sequence is the organizing tool for the Mars instructional series. The 5E stages can be cyclical and iterative.

## 2.0 Instructional Objectives, Learning Outcomes, & Standards

Instructional objectives and learning outcomes are aligned with

- National Research Council's, *A Framework for K-12 Science Education: Practices, Crosscutting Concepts, and Core Ideas*
- Achieve Inc.'s, *Next Generation Science Standards (NGSS)*
- National Governors Association Center for Best Practices (NGA Center) and Council of Chief State School Officers (CCSSO)'s, *Common Core State Standards for English Language Arts & Literacy in History/Social Studies, Science, and Technical Subjects*
- Partnership for 21<sup>st</sup> Century Skills, *A Framework for 21<sup>st</sup> Century Learning*

The following chart provides details on alignment among the core and component NGSS questions, instructional objectives, learning outcomes, and educational standards.

- Your **instructional objectives (IO)** for this lesson align with the NGSS Framework and NGSS.
- You will know that you have achieved these instructional objectives if students demonstrate the related **learning outcomes (LO)**.
- You will know the level to which your students have achieved the learning outcomes by using the suggested **rubrics** (see Teacher Guide at the end of this document).

**Important Note: This lesson is color-coded to help teachers identify each of the three dimensions of NGSS. The following identifying colors are used: Practices are blue, Cross-Cutting Concepts are green, and Disciplinary Core Ideas are orange.**

**This color-coding is consistent with the NGSS Performance Expectations and Foundation Boxes.**

### Quick View of Standards Alignment:

The Teacher Guide at the end of this lesson provides full details of standards alignment, rubrics, and the way in which instructional objectives, learning outcomes, 5E activity procedures, and assessments were derived through, and align with, Anderson and Krathwohl's (2001) taxonomy of knowledge and cognitive process types. For convenience, a quick view follows:

**HOW DO ENGINEERS SOLVE PROBLEMS?**

NGSS Core Question: ETS1: Engineering Design

**What is a design for? What are the criteria and constraints of a successful solution?**

### 3.0 Learning Outcomes, NGSS, Common Core, & 21<sup>st</sup> Century Skills Connections

The connections diagram is used to organize the learning outcomes addressed in the lesson to establish where each will meet the Next Generation Science Standards, ELA Common Core Standards, and the 21<sup>st</sup> Century Skills and visually determine where there are overlaps in these documents.

Next Generation  
Science Standards

Common Core State  
Standards

The Partnership for  
21<sup>st</sup> Century Skills

#### 4.0 Evaluation/Assessment

Use the *(L) Strange New Planet Rubric* as a formative and summative assessment, allowing students to improve their work and learn from mistakes during class. The rubric evaluates the activities using the Next Generation Science Standards, Common Core State Standards, and 21<sup>st</sup> Century Skills.

(J) Teacher Resource. Strange New Planet 21<sup>st</sup> Century Skills Alignment

 <b>21<sup>st</sup> Century Skills</b>			
<b>Learning Outcomes</b> <i>Students will demonstrate the measurable abilities</i>	<b>21<sup>st</sup> Century Skill</b>	<b>Grade 4 Benchmark</b>	<b>Grade 8 Benchmark</b>
<b>LO1a:</b> conduct an investigation into the types of empirical data collected by a variety of mission types (tools and instruments) and identify the limitations presented by each design.	<b>Communication</b>	Students understand that models are simplified representations of real objects and processes, and that models serve as a means to communicate ideas and knowledge about how things work.	
	<b>Collaboration</b>		Students work collaboratively with others, either virtually or face-to-face, while participating in scientific discussions and appropriately using claims, evidence, and reasoning.
	<b>Critical Thinking and Problem Solving</b>	Students construct their own scientific understanding and develop their scientific process skills by asking scientific questions, designing and conducting investigations, constructing explanations from their observations, and discussing their explanations with others.	
	<b>Information and Communications Technology (ICT) Literacy</b>		Students can articulate how technology is essential to science for such purposes as sample collection and treatment, measurement, data collection and storage, computation, and communication of information.
	<b>Productivity and Accountability</b>	Students identify a variety of tools and techniques that scientists use to gather scientific information depending on what it is they want to know and the circumstances under which data will be collected.	
<b>LO1b:</b> reflect on the investigation and the impacts of teamwork among scientists and engineers on data collection tools, the limitations presented through mission types, and the advancement of scientific findings	<b>Communication</b>	Students understand that models are simplified representations of real objects and processes, and that models serve as a means to communicate ideas and knowledge about how things work.	
	<b>Collaboration</b>		Students work collaboratively with others, either virtually or face-to-face, while participating in scientific discussions and appropriately using claims, evidence, and reasoning.
	<b>Critical Thinking and Problem Solving</b>	Students construct their own scientific understanding and develop their scientific process skills by asking	

		scientific questions, designing and conducting investigations, constructing explanations from their observations, and discussing their explanations with others.	
	<b>Information and Communications Technology (ICT) Literacy</b>		Students can articulate how technology is essential to science for such purposes as sample collection and treatment, measurement, data collection and storage, computation, and communication of information.
	<b>Flexibility and Adaptability</b>	Students can identify how improvements in scientific instruments can lead to new discoveries.	
	<b>Productivity and Accountability</b>	Students identify a variety of tools and techniques that scientists use to gather scientific information depending on what it is they want to know and the circumstances under which data will be collected.	
	<b>Social and Cross-Cultural Skills</b>		Students are able to structure scientific discussions to allow for differing opinions, observations, experiences, and perspectives.
<b>LO1c:</b> acting as scientists and engineers, develop a Humans to Mars mission concept including science, engineering and technology solutions necessary to complete the mission using research on the criteria and limitations presented from past Mars missions.	<b>Communication</b>	Students understand that models are simplified representations of real objects and processes, and that models serve as a means to communicate ideas and knowledge about how things work.	
	<b>Collaboration</b>		Students work collaboratively with others, either virtually or face-to-face, while participating in scientific discussions and appropriately using claims, evidence, and reasoning.
	<b>Critical Thinking and Problem Solving</b>	Students construct their own scientific understanding and develop their scientific process skills by asking scientific questions, designing and conducting investigations, constructing explanations from their observations, and discussing their explanations with others.	
	<b>Information and Communications Technology (ICT) Literacy</b>		Students can articulate how technology is essential to science for such purposes as sample collection and treatment, measurement, data collection and storage, computation, and communication of information.
	<b>Flexibility and Adaptability</b>	Students can identify how improvements in scientific instruments can lead to new discoveries.	
	<b>Productivity and Accountability</b>	Students identify a variety of tools and techniques that scientists use to gather scientific information depending on what it is they want to know and the circumstances under which data will be collected.	

**(L) Teacher Resource. Strange New Planet NGSS Rubric (1 of 3)****Related Rubrics for the Assessment of Learning Outcomes Associated with the Above Standard(s):****Next Generation Science Standards Alignment (NGSS)**

<b>Learning Outcome</b>	<b>Expert</b>	<b>Proficient</b>	<b>Intermediate</b>	<b>Beginner</b>
<b>LO1a: conduct an investigation</b> into the types of empirical data collected by a variety of mission types (tools and instruments) and identify the limitations presented by each design.	Collects multiple quantitative and qualitative data sets for each type of mission and records the data clearly. Identifies thoughtful questions left unanswered by the data from earlier missions and attempts to explore answers to them in subsequent missions.	Collects multiple quantitative and qualitative data sets for each type of mission and records the data clearly. Identifies one thoughtful question left unanswered by the data from earlier missions and attempts to explore answers to it in subsequent missions.	Collects and records quantitative or qualitative data for each type of mission. Asks some questions about the data from earlier missions that that may or may not be related to missions.	Collects data from peers and asks questions unrelated to the missions presented.
<b>LO1b: to reflect</b> on the investigation and the impacts of teamwork among scientists and engineers on data collection tools, the limitations presented through mission types, and the advancement of scientific findings.	Provides a detailed explanation of the interdependence of scientists and engineers. Citing appropriate evidence, specifically the types of tools that match the type of desired science, from the activity and personal experience to support the explanation.	Provides a detailed explanation of the interdependence of scientists and engineers. Citing appropriate evidence from the activity to support the explanation.	Provides an explanation of the interdependence of scientists and engineers. Citing evidence from the activity to support the explanation.	States scientists and engineers work together and attempts to cite evidence from the activity.
<b>LO1c: acting</b> as scientists and engineers, develop a Humans to Mars mission concept including science, engineering and technology solutions necessary to complete the mission using research on the criteria and limitations presented from past Mars missions.	Clearly defines a Mars mission concept that incorporates important scientific goals in addition to choosing appropriate technology options to investigate the science goals.	Defines a Mars mission concept that incorporates scientific goals in addition to choosing appropriate technology options to investigate the science goals.	Defines a Mars mission concept that incorporates a scientific goal in addition to choosing an appropriate technology option to investigate the science goal.	Attempts to identify a science goal and match it to a technology option.

## (L) Teacher Resource. Strange New Planet CCSS Rubric (2 of 3)

## Common Core – ELA

	Expert	Proficient	Intermediate	Beginner
Craft and Structure	Determines and uses domain-specific words and phrases from text to accurately support ideas.	Determines and uses domain-specific words and phrases from text to support ideas.	Uses domain-specific words and phrases from text with occasional errors to support ideas.	Uses standard language to support ideas.
Integration of Knowledge and Ideas	Uses a combination of drawing, dictating, and writing to provide a description of the results of the experiment, supported with evidence from the experiment and text or multimedia.	Uses a combination of drawing, dictating, and writing to describe the results of the experiment and text or multimedia.	Uses a drawing, dictation, or writing to describe the results of the experiment.	Description of the result is based on prior knowledge or preconceptions.
Text Type and Purposes	Introduces topic clearly, provides a general observation and focus, and groups related information logically; Develops the topic with facts, definitions, concrete details, or other examples related to the topic; Links ideas using words, phrases, and clauses; Use domain-specific vocabulary to explain the topic; Provides a concluding statement related to the explanation.	Introduces topic clearly, provides a general observation, or groups related information logically; Develops the topic with concrete details, or other examples related to the topic; Links ideas using words or phrases; Uses domain-specific vocabulary to explain the topic; Provides a concluding statement related to the explanation.	Introduces topic, provides a general observation; Develops the topic with details, or other examples related to the topic; Links ideas using words or phrases; Uses domain-specific vocabulary to explain the topic; May or may not provide a concluding statement.	Introduces topic; Develops the topic with details, or other examples, potentially unrelated; Uses specific vocabulary to explain the topic; May or may not provide a concluding statement.
Research to Build and Present Knowledge	Recalls relevant information from experience; summarizes information in finished work; draws evidence from informational texts to support analysis, reflection, and research.	Recalls relevant information from experience; draws evidence from informational texts to support analysis, reflection, and research.	Recalls information from experience; draws evidence from informational texts to support analysis, reflection, and research.	Recalls information from experience.
Comprehension and Collaboration	Clearly articulates ideas in collaborative discussion while following agreed upon class rules for discussion. Extremely prepared drawing from experiences. Asks clarifying questions to ensure full understanding of content. Articulates own ideas related to the discussion and connects others ideas to own.	Articulates ideas in collaborative discussion while following agreed upon class rules for discussion. Prepared for discussion by drawing from experiences. Asks questions. Articulates own ideas related to the discussion.	Interested in collaborative discussion. Asks questions. Articulates own ideas related to the discussion.	Interested in collaboration with peers.

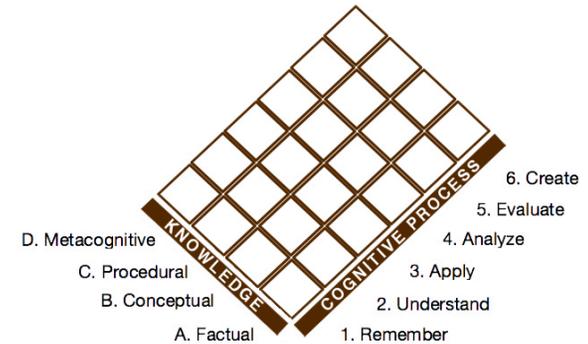

(L) Teacher Resource. Strange New Planet 21<sup>st</sup> Century Skills Rubric (3 of 3)Partnership for 21<sup>st</sup> Century Skills

	Expert	Proficient	Intermediate	Beginner
Effectiveness of social and cross-cultural collaboration with team members and class.	Extremely interested in collaborating in the simulation. Actively provides solutions to problems, listens to suggestions from others, attempts to refine them, monitors group progress, and attempts to ensure everyone has a contribution.	Extremely interested in collaborating in the simulation. Actively provides suggestions and occasionally listens to suggestions from others. Refines suggestions from others.	Interested in collaborating in the simulation. Listens to suggestions from peers and attempts to use them. Occasionally provides suggestions in group discussion.	Interested in collaborating in the group or spend majority of the time off topic.
Effectiveness of Critical Thinking and Problem Solving	Develops detailed verbal explanations based on experimental evidence. Compares explanations to those made by peers and relates them to their new understandings.	Develops detailed verbal explanations based on experimental evidence. Relates them to their new understandings.	Develops verbal explanations. Relates explanation to their new understandings.	Attempts to explain the design based on own preconceived understanding or generally agree with the explanations provided by the group.
Effectiveness in Communication	Demonstrates the understanding that this is a simple model of how we explore, not all missions are represented, and communication is rooted in reality, not make-believe.	Demonstrates the understanding that this is a simple model of a how we explore, not all missions are represented, and may pretend the simulation is real, but majority of the experiment is rooted in reality.	Demonstrates the understanding that this is a simple model of how we explore and may pretend the simulation is real, but majority of the experiment is rooted in reality.	Plays during the simulation regardless of the goals of the task
Effectiveness of Productivity and Accountability	Accurately collects data and able to demonstrate good practices for data collection such as using standard measurement with correct tools <b>and</b> identifying common sources of error.	Accurately collects data and able to demonstrate good practices for data collection such as using standard measurement with correct tools <b>or</b> identifying common sources of error.	Accurately collects data.	Records data other team members have collected.
Effective use of Information and Communications Technology (ICT) Literacy	Gives examples that demonstrate how technology extends the ability of people to observe and understand planets including how people communicate, gain knowledge, and express ideas.	Gives examples that demonstrate how technology extends the ability of people to observe and understand planets including how people communicate, gain knowledge, or express ideas.	Gives one example to demonstrate how technology extends the ability of people to observe and understand planets.	Examples are based on preconceived misconceptions about the use of technology to extend the knowledge of people.
Effectiveness of Flexibility and Adaptability	Can accurately identify examples from the activity on how improvements in scientific instruments can lead to new discoveries.	Can accurately identify at least one example from the activity on how improvements in scientific instruments can lead to new discoveries.	Can identify at least one example from the activity on how improvements in scientific instruments can lead to more information.	Claims all scientific instruments will yield the same information or bases examples on preconceived misconceptions.

**(M) Teacher Resource. Placement of Instructional Objective and Learning Outcomes in Taxonomy (1 of 3)**

This lesson adapts Anderson and Krathwohl’s (2001) taxonomy, which has two domains: Knowledge and Cognitive Process, each with types and subtypes (listed below). Verbs for objectives and outcomes in this lesson align with the suggested knowledge and cognitive process area and are mapped on the next page(s). Activity procedures and assessments are designed to support the target knowledge/cognitive process.

Knowledge	Cognitive Process
<p><b>A. Factual</b>  <b>Aa:</b> Knowledge of Terminology  <b>Ab:</b> Knowledge of Specific Details &amp; Elements</p> <p><b>B. Conceptual</b>  <b>Ba:</b> Knowledge of classifications and categories  <b>Bb:</b> Knowledge of principles and generalizations  <b>Bc:</b> Knowledge of theories, models, and structures</p> <p><b>C. Procedural</b>  <b>Ca:</b> Knowledge of subject-specific skills and algorithms  <b>Cb:</b> Knowledge of subject-specific techniques and methods  <b>Cc:</b> Knowledge of criteria for determining when to use appropriate procedures</p> <p><b>D. Metacognitive</b>  <b>Da:</b> Strategic Knowledge  <b>Db:</b> Knowledge about cognitive tasks, including appropriate contextual and conditional knowledge  <b>Dc:</b> Self-knowledge</p>	<p><b>1. Remember</b>  <b>1.1</b> Recognizing (Identifying)  <b>1.2</b> Recalling (Retrieving)</p> <p><b>2. Understand</b>  <b>2.1</b> Interpreting (Clarifying, Paraphrasing, Representing, Translating)  <b>2.2</b> Exemplifying (Illustrating, Instantiating)  <b>2.3</b> Classifying (Categorizing, Subsuming)  <b>2.4</b> Summarizing (Abstracting, Generalizing)  <b>2.5</b> Inferring (Concluding, Extrapolating, Interpolating, Predicting)  <b>2.6</b> Comparing (Contrasting, Mapping, Matching)  <b>2.7</b> Explaining (Constructing models)</p> <p><b>3. Apply</b>  <b>3.1</b> Executing (Carrying out)  <b>3.2</b> Implementing (Using)</p> <p><b>4. Analyze</b>  <b>4.1</b> Differentiating (Discriminating, distinguishing, focusing, selecting)  <b>4.2</b> Organizing (Finding coherence, integrating, outlining, parsing, structuring)  <b>4.3</b> Attributing (Deconstructing)</p> <p><b>5. Evaluate</b>  <b>5.1</b> Checking (Coordinating, Detecting, Monitoring, Testing)  <b>5.2</b> Critiquing (Judging)</p> <p><b>6. Create</b>  <b>6.1</b> Generating (Hypothesizing)  <b>6.2</b> Planning (Designing)  <b>6.3</b> Producing (Constructing)</p>

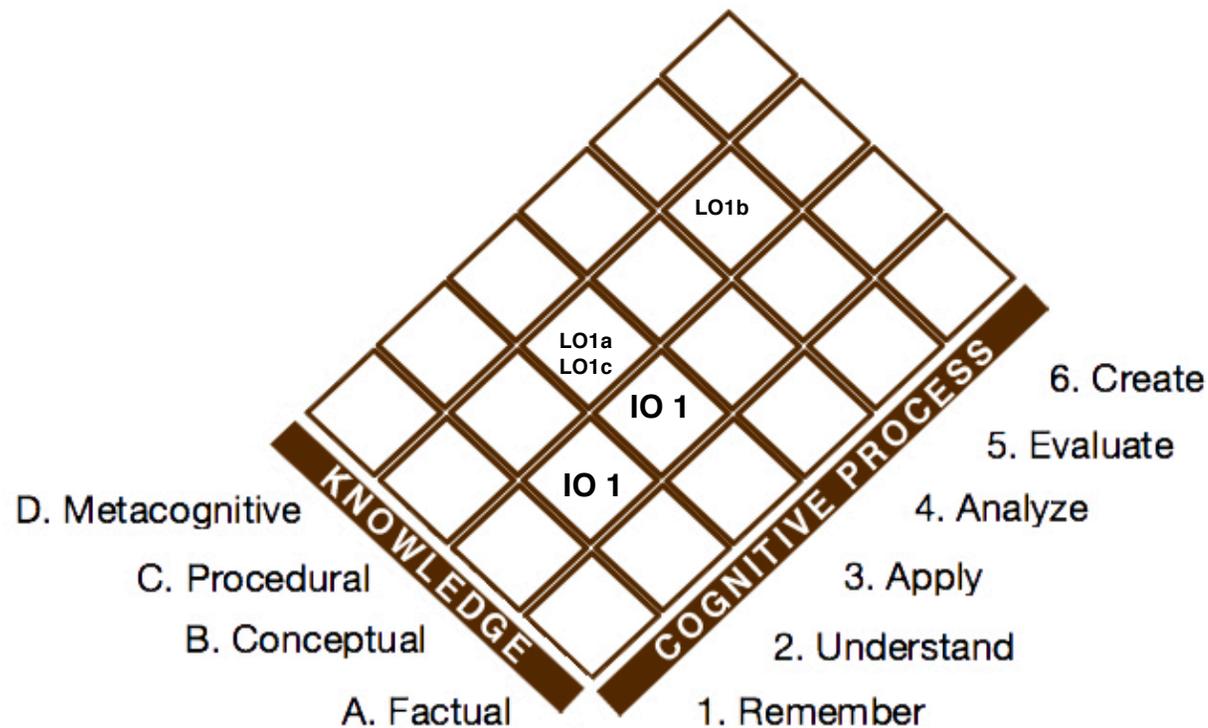

### (M) Teacher Resource. Placement of Instructional Objective and Learning Outcomes in Taxonomy (2 of 3)

**IO1:** use a physical model to **investigate and describe** how scientists and engineers understand the limitations presented through certain technologies and use a variety of increasingly complex tools to explore our solar system. (3.1, 2.7; Bc)

**LO1a.** **conduct an investigation** into the types of empirical data collected by a variety of mission types (tools and instruments) and identify the limitations presented by each design. (3.1; Cb)

**LO1b.** **to reflect** on the investigation and the impacts of teamwork among scientists and engineers on data collection tools, the limitations presented through mission types, and the advancement of scientific findings (5.2; Cb)

**LO1c.** **acting** as scientists and engineers, develop a Humans to Mars mission concept including science, engineering and technology solutions necessary to complete the mission using research on the criteria and limitations presented from past Mars missions. (3.1; Cb)

### (M) Teacher Resource. Placement of Instructional Objective and Learning Outcomes in Taxonomy (3 of 3)

The design of this activity leverages Anderson & Krathwohl's (2001) taxonomy as a framework. Below are the knowledge and cognitive process types students are intended to acquire per the instructional objective(s) and learning outcomes written for this lesson. The specific, scaffolded 5E steps in this lesson (see 5.0 Procedures) and the formative assessments (worksheets in the Student Guide and rubrics in the Teacher Guide) are written to support those objective(s) and learning outcomes. Refer to (M, 1 of 3) for the full list of categories in the taxonomy from which the following were selected. The prior page (M, 2 of 3) provides a visual description of the placement of learning outcomes that enable the overall instructional objective(s) to be met.

---

#### At the end of the lesson, students will be able

---

**IO1:** use a physical model to **investigate and describe** how scientists and engineers understand the limitations presented through certain technologies and use a variety of increasingly complex tools to explore our solar system.

**3.1:** to carry out

**2.7:** to explain

**Bc:** Knowledge of theories, models, and structures

---

#### To meet that instructional objective, students will demonstrate the abilities:

---

**LO1a: conduct an investigation** into the types of empirical data collected by a variety of mission types (tools and instruments) and identify the limitations presented by each design.

**3.1:** to conduct

**Cb:** Knowledge of subject-specific techniques and methods

**LO1b: to reflect** on the investigation and the impacts of teamwork among scientists and engineers on data collection tools, the limitations presented through mission types, and the advancement of scientific findings.

**5.2:** to critique

**Cb:** Knowledge of subject-specific techniques and methods

**LO1c: acting** as scientists and engineers, develop a Humans to Mars mission concept including science, engineering and technology solutions necessary to complete the mission using research on the criteria and limitations presented from past Mars missions.

**3.1:** to carry out

**Cb:** Knowledge of subject-specific techniques and methods
